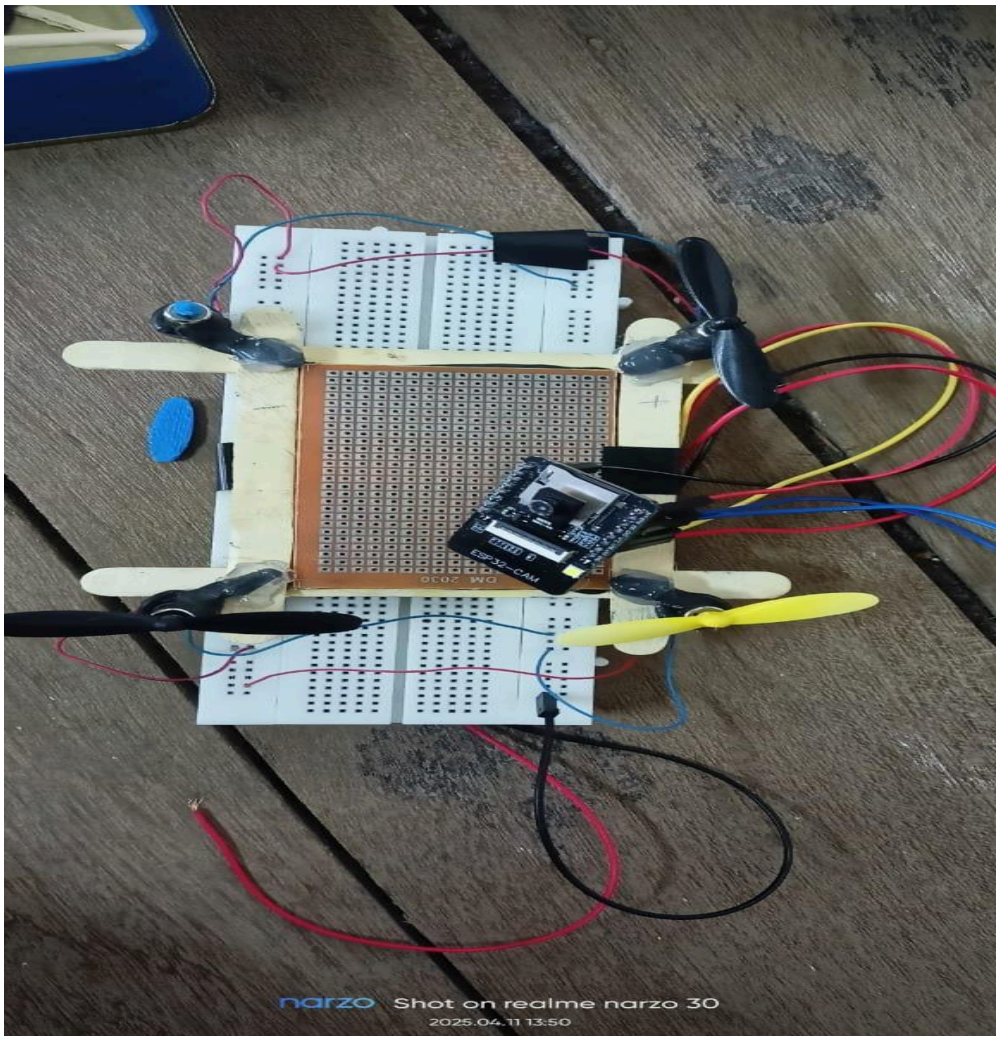
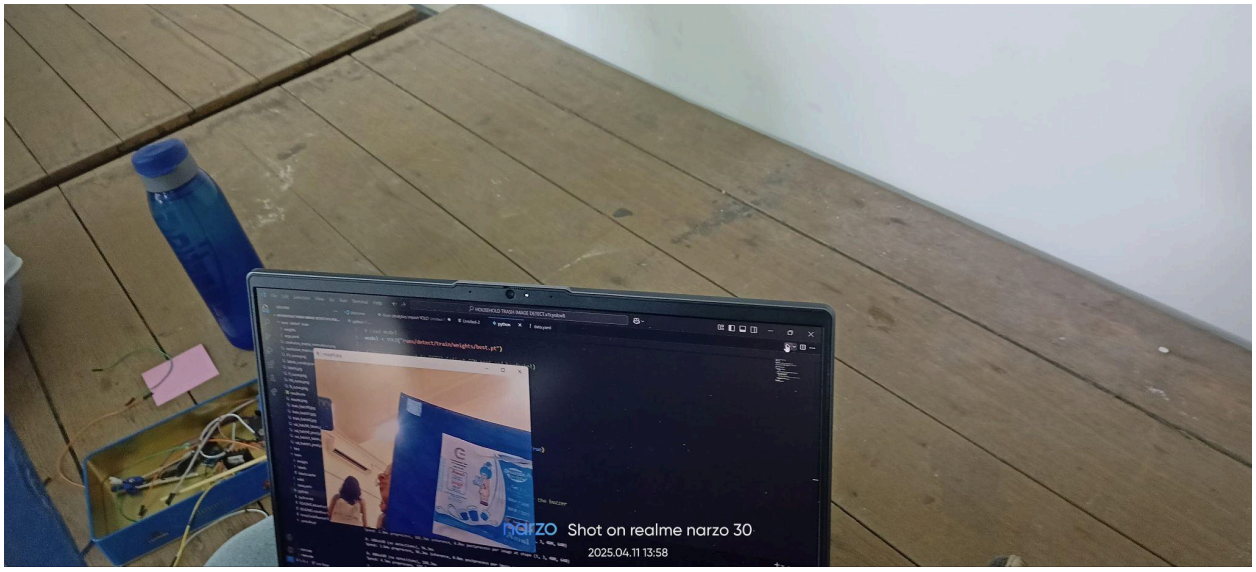
Group 3 - Household Garbage Detecting Drone (via Image recognition)

Images of the model:

This image is showcasing our hardware model of the drone, including: breadboard, 3.7V battery, 4 720 coreless motors and 35mm propellers.



This image showcases our Software Model, on VS Code for identifying the trash using the web camera of the laptop.



Following are the images of the wet-trash we used to train our image detecting model:

A milk Packet:

A Frooti bottle:

Peanut Packets and Egg Shells:

Thank you so much for providing us with a chance to explore the themes of ML, Drone via this project.
